What We Talk to When We Talk to Language Models (test fixture)

Page one, line 1. One could understand threads and inheritance in a permissive way.

Page one, line 2. One could understand threads and inheritance in a permissive way.

Page one, line 3. One could understand threads and inheritance in a permissive way.

Page one, line 4. One could understand threads and inheritance in a permissive way.

Page one, line 5. One could understand threads and inheritance in a permissive way.

Page one, line 6. One could understand threads and inheritance in a permissive way.

Page one, line 7. One could understand threads and inheritance in a permissive way.

Page one, line 8. One could understand threads and inheritance in a permissive way.

Page two, line 1. In the multiple-model case the continuity between instances is much lower.
Page two, line 2. In the multiple-model case the continuity between instances is much lower.
Page two, line 3. In the multiple-model case the continuity between instances is much lower.
Page two, line 4. In the multiple-model case the continuity between instances is much lower.
Page two, line 5. In the multiple-model case the continuity between instances is much lower.
Page two, line 6. In the multiple-model case the continuity between instances is much lower.
Page two, line 7. In the multiple-model case the continuity between instances is much lower.
Page two, line 8. In the multiple-model case the continuity between instances is much lower.
The end of the fixture paper.
